

Fabric frames as digital signage installations in outdoor areas

EPS.DIGIFLEX

Benefits over other LED display solutions

- Low weight
- Very thin foil
- Lower power consumption
- Special shapes possible
- Format independent

Profile variety with system

With EPS.DIGIFLEX, outdoor tensioning systems can be quickly and easily converted into digital signage systems.

An outdoor-capable thin LED film is used for this purpose, which is attached to a tensioning fabric using industrial Velcro.

One square metre of the P16 LED film has a power consumption of only 180 watts in video mode.

The banner LED films are not only waterproof (IP66), but also offer high contrast even in strong sunlight.

The video and image content is uploaded to a cloud via a content management system so that it can be configured from anywhere.
