- Rapid change of motif without tools
- Suitable for floor, ceiling and wall mounting
- EASYQuick for fast clamping and also suitable for recesses
- Curved profiles realizable according to specifications

Classic applications:

- Banner
- Exhibition stands
- Custom shapes

Profile variety with system

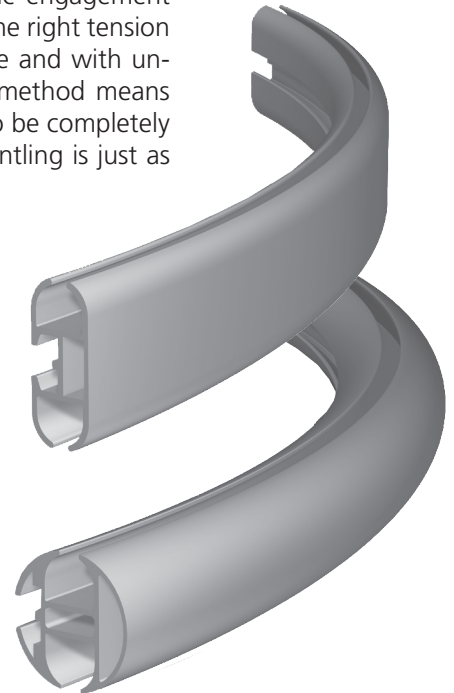

EASY – the whole variety

Whether at the top or bottom, with wall brackets or as a room divider, EASY offers you many options for mounting your banners. Using custom curves, our EASY profiles allow real head-turners to be created. Irrespective of whether it is for an exhibition or art project, our experienced staff are able to create a wide range of curved shapes with our CNC machinery.

Faster clamping is not possible!

The patented EASYQUICK wall bracket really lives up to its name. The automatic engagement technology allows you to achieve the right tension using no tools other than a handle and with unparalleled speed. This installation method means that areas such as recesses can also be completely covered with a banner. And dismantling is just as rapid.

Four-sided possible

Four-sided frames can now also be produced with our corner connectors. Easy to use, cleanly tensioned fabric, available for both oval and round keder profiles.
