

The system for large-scale outdoor advertising

EPS.LUMI

© Thomas Rebel

Benefits

- Suitable for large-scale applications
- Aluminium profiles for long-term use
- Four-sided frame profile for perfect clamping of the fabric by means of flexholder technology
- Special solution for recesses
- Custom shapes possible

Classic applications:

- Illuminated sign cases
- Banner
- Illuminated ceiling
- Letters
- Custom shapes

Profile variety with system

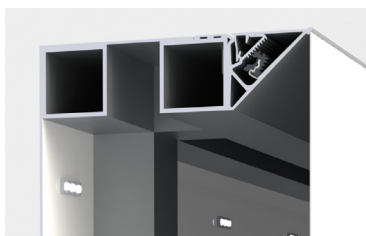

Overview profile types

Main body profiles

- Main body profiles with a building depth of 120 mm and 180 mm
- Only a few components for fast, economical and easy assembly
- The low profile depth is well suited to LED frame lighting or large-area illumination
- The new design offers increased stability with the proven LUMI clamping technology

Retrofits

- The Retrofits AP 84 and AP 97 have also smaller building depths than their previous versions
- The front side of all of the profiles has a frameless design
- The motif can run right up to the outer edge of the profil
- The fabric is clamped and unclamped at the side.
- As a kit, they are also suitable for converting existing acrylic cases.

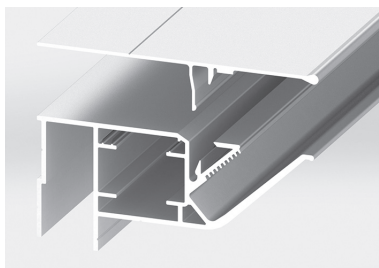

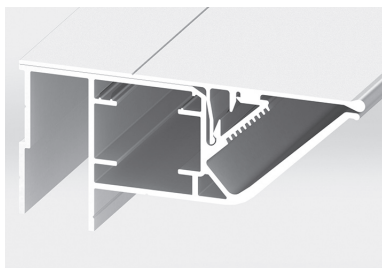

GRIP

- Available in the following versions: Medium main body, Front opening retrofit JR and Front opening wallmounted
- The profile can be fitted from the front
- It is particularly suited to installation in recesses
- Profiles for non-illuminated wall displays can be fixed directly to the wall without a substructure

Redesign for cover profiles

We now offer you also broad cover profiles for our basic profiles - anodized on request. Save time and money in the manufacturing of your advertising structures.

Well-proven technology

- Perfect tension due to flexholder technology
- Simple frame construction with few components
- Easy opening and re-clamping of the fabric area
- Maintenance and conversion costs are reduced significantly
- Custom forms are possible
