

The keder clamping system for illuminated outdoor advertising

EPS.RAIL

Benefits

- Stable keder clamping system for outdoor use
- Large span widths possible without a joint
- Variable for rear wall or frame illumination
- Can be combined with profile system EPS.LUMI

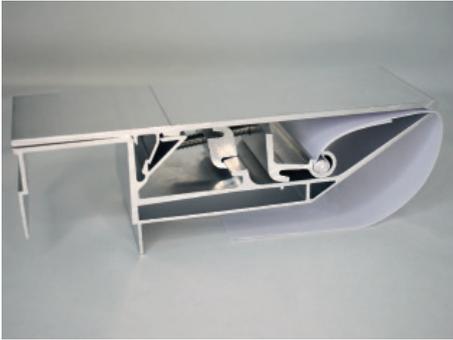

Classic applications:

- Illuminated sign cases
- Banner

Profile variety with system

EPS.RAIL completes our portfolio

- Main body profile with a building depth of 180 mm
- Variable mounting options for the rear wall (180 mm and 140 mm)
- Fabric manufacture using aluminum piping, hemstitch or keder flap
- Available as full length or completely cut-to-size kits
- High stability

Frameless optics

Wide cover profile ensures a frameless look.
Also available anodized on request.

Combinability

Can be combined with the EPS.LUMI basic profile 180. This means that special shapes or rounded corners are possible, because components such as connectors, stiffening material and lighting are identical.
