

The clamping bar system for filigree frames

EPS.REDY

Benefits

- Self-supporting frame solutions in filigree optics
- Even clamping on four sides using PVC clamping bars
- No prior fabric preparation required
- Variety of creative options and custom shapes possible

Classic applications:

- Banner
- Exhibition stands
- Shopfitting
- Custom shapes

Profile variety with system

Low preparation work

The key benefit of the system is that the fabric does not require preparation work. With the PVC clamping strip, the fabric is clamped on all sides and the residual fabric is cut off. All of the surfaces can be designed quickly and without a great deal of work with tools. Conversion costs and hours of labour are significantly reduced.

Fabric tensioning instruction

The mounting and clamping of the fabric represents the final step in the system. The clamping bar CS is also suitable for outdoor use. The standard colour is white (other colours are available).

Custom shapes

Even custom shapes can be realized with REDY. Feel free to contact us, we will advise you.
