

### Benefits

- Self-supporting frame solutions
- Slimline appearance
- Even clamping on all sides using PVC clamping strips
- No prior fabric preparation required
- Variety of creative options
- Custom shapes possible

# EPS.READY

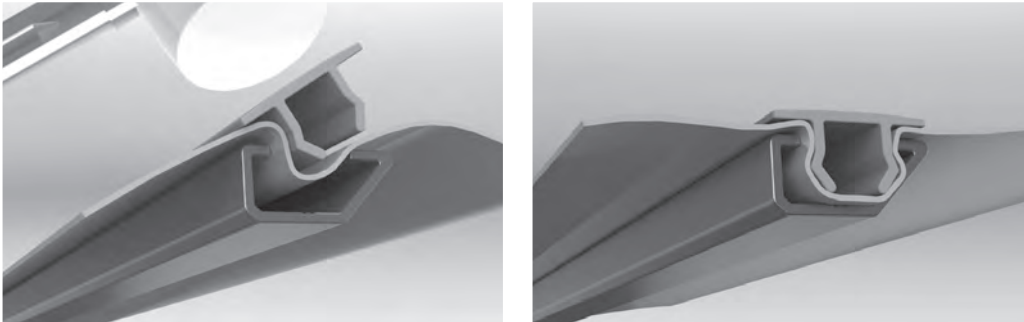

The modular clamping system

#### Classic applications:

- Displays
- Exhibition stands
- Shopfitting
- Custom shapes

## Low preparation work

The key benefit of the system is that the fabric does not require preparation work. With the PVC clamping strip, the fabric is clamped on all sides and the residual fabric is cut off. All of the surfaces can be designed quickly and without a great deal of work with tools. Conversion costs and hours of labour are significantly reduced.

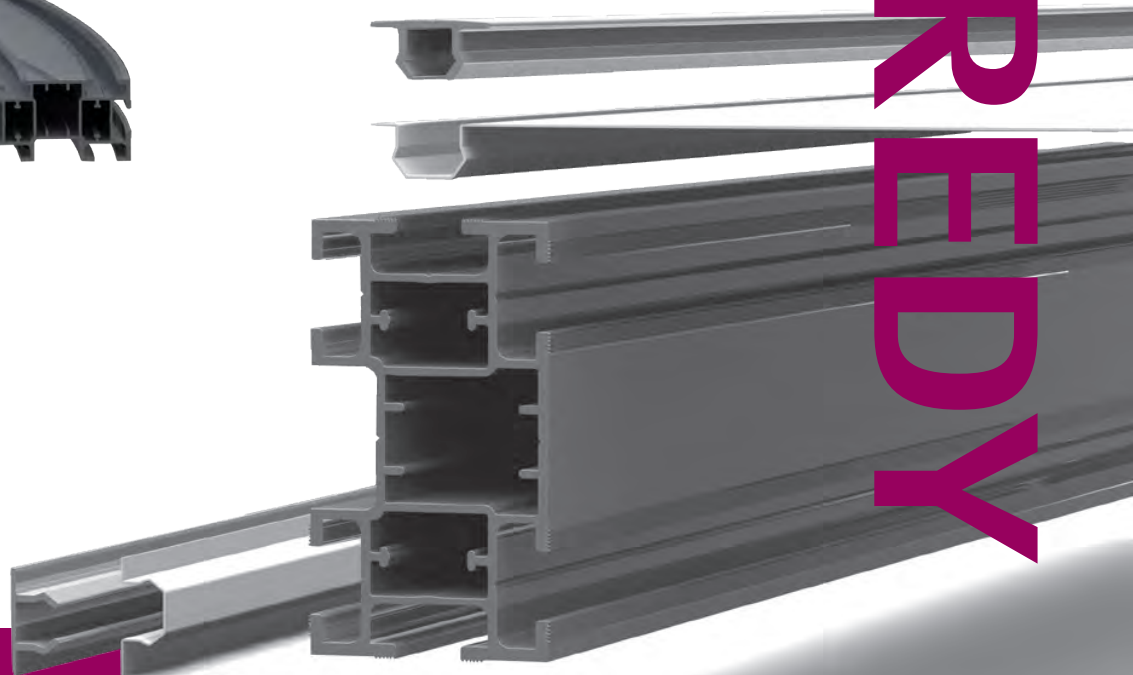

## Fabric tensioning instruction

The mounting and clamping of the fabric represents the final step in the system. For frames which are used in interior rooms, please use the classic clamping bar CN. For the outdoor area, use the reinforced clamping bar CS. The standard colour is white (other colours are available).

## Custom shapes

Even custom shapes can be realized with REDY. Feel free to contact us, we will advise you.
